

# What's New in ArcGIS 10

Sarah Schrader – Goodhue County

Nick Meyers – Winona County

*SE MN GIS Users Group Meeting – July 22<sup>nd</sup>, 2010*

# What's New in ArcGIS 10

- Now available to install by download from ESRI website or from media.
- PDF Document: [What's New in ArcGIS 10](#)
- Editing Interface
- More Integration with Python – Arcpy
  - Find/replace data sources for multiple mxd's
  - Update a layer's symbology for multiple mxd's
  - Works great to produce Map Books → Can now create map books with information from multiple mxd's.

# What's New in ArcGIS 10

## 9.x and 10 License Managers

- If you are currently using a License Manager released prior to ArcGIS 10, you first need to uninstall this older version to proceed with the installation of the ArcGIS License Manager 10.
- License files at version 9 or earlier will not work with this new version of the License Manager. You will need to first authorize licenses on the license server using the new ESRI Customer Care Portal <https://customers.esri.com>.
- Setting up the License Manager in ArcGIS 10 can be accomplished with either the new Provisioning files (enterprise environment) or by manually entering in the authorization number into the license manager and selecting the number of licenses.

# What's New in ArcGIS 10

## Server Upgrade/Requirements

- Check ArcGIS Server System Requirements.
- ArcGIS 10 Desktop is required for ArcGIS Server 10 (SDE).
- **Suggested Workflow:**
  - ArcGIS 10 client → Operating System → DBMS → Upgrade ArcSDE → Post upgrade Configuration

# What's New in ArcGIS 10

## Parcel Editor Toolbar

- Free Toolbar in ArcInfo & ArcEditor that replaces the Survey Analyst Extension
- Featured Functions
  - Split by area, parcel merge, parcel traverse
  - Least-square calculation
  - New editing features in ArcGIS 10
- Updated Parcel Fabric Model (Cadastral Data Management)
  - Related tables and feature classes for maintaining PLSS Data.
  - All layers (Plats, Lots, Blocks, Parcels) are connected and updated together using points and lines.
  - Topology inherently contained within all of these layers.
  - Related GIS Layers can be updated to include changes to the Parcel Fabric Feature Classes.
